# Where can my robots go?

Where can my robots go?

giving a meticulous look we can see the term *robot* repeated thrice.
So? yea its a hint.

Now if you are solving this CTF you should already be knowing about robots.txt files of a websites.

Web site owners use the /robots.txt file to give instructions about their site to web robots; this is called **The Robots Exclusion Protocol.**

for fun, lets use CURL command in linux to find the flag

STEPS:

- curl https://www.ctflearn.com/robots.txt

- we come across the page giving us the info

```
User-agent: *
Disallow: /70r3hnanldfspufdsoifnlds.html
```

- the user agent part tells the robots/crawlers etc. that this sections is applied to all robots and the Disallow part tells the robots on internet, not to visit the site.
- we are also given another hint in a .html form. So, lets use curl again
- curl https://www.ctflearn.com/70r3hnanldfspufdsoifnlds.html

```
└── $curl https://www.ctflearn.com/70r3hnanldfspufdsoifnlds.html

CTFlearn{r0b0ts_4r3_th3_futur3}┌─[non_root@parrot]─[~/Downloads]
```

answer: CTFlearn{r0b0ts_4r3_th3_futur3}
